Andrew Stewart
Chief
Permits and Stationary Source Modeling Section
Bureau of Air Management
Wisconsin Department of Natural Resources
PO Box 7921
Madison, Wisconsin 53707-7921

Dear Mr. Stewart:

The U.S. Environmental Protection Agency has the following comments on the Wisconsin Department of Natural Resources' draft of the Prevention of Significant Deterioration (PSD) Permit for Enbridge Energy Co. The draft permit is being proposed as a PSD permit (#12-DCF-054) and a Title V permit revision (#816010580-P08). The permit pertains to fugitive emissions associated with operation and maintenance activities of the Southern Access Pipeline.

In order to ensure that the project meets Federal Clean Air Act requirements, that the permit will provide necessary information so that the basis for the permit decision is transparent and readily accessible to the public, and that the permit record provides adequate support for the decision, EPA has the following comment.

As of January 2, 2011, a source subject to PSD requirements for a pollutant other than greenhouse gas emissions (GHG) can also be subject to PSD requirements for GHG if the potential to emit (PTE) is 75,000 tons per year or greater of carbon dioxide-equivalent. Please provide the GHG PTE. If the GHG PTE is greater than the 75,000 tons per year please conduct a PSD Best Available Control Technology (BACT) analysis and incorporate the selected BACT into the permit.

We look forward to working with you to address all of our comments. If you have any further questions, please feel free to contact Andrea Morgan, of my staff, at (312) 353-6058.

Sincerely,

A handwritten signature in cursive script that reads "Genevieve Damico".

Genevieve Damico
